

CHAPTER-14

LIVING WORLD BEYOND OUR EARTH

Highlights about the chapter LIVING WORLD BEYOND OUR EARTH in MATERIALISTIC UNIVERSE by Ramesh Varma.

Note: Chapter over LIVING WORLD BEYOND OUR EARTH is not an encyclopedia. Challenger has illustrated only which relates to the new or contrary findings/understandings with some existing references to make the subject understandable.

- Not even single UFO (Un-identified Flying Object) from world other than the Earth had ever visited the Earth, nor would visit us in the future.
- We can send wireless messages all around but we can never send a message that can be picked by any one away from the Earth for reply to us nor can we receive such expected wireless message from outside world.
- We cannot send human to space or over to any celestial body, where travelling requires more than half life span of the human.
- Human cannot live for a long period over any celestial body, if its gravity is more than 50% that of the Earth.
- Human cannot colonize human over any celestial body for more than a few decades because of its links (life-line) with the Earth-world.
- Human can not be teleported.

CHAPTER - 14

LIVING WORLD BEYOND OUR EARTH

From ages human is making imaginary stories with the presumption that some one from another world has visited the Earth or had/has seen an object or a flying machine which was from the outside world. Stories also include that some in the past from the Earth had visited the world which is away from the Earth.

Within just 150 years of wire-less technology and flying machines technology of 100 years old, we have started thinking beyond permissible limits of the human

Author has concluded that:

- Not even single UFO (Un-identified Flying Object) from world other than the Earth had ever visited the Earth, nor would visit us in the future.
- We can send wireless messages all around but we can never send a message that can be picked by any one away from the Earth for reply to us nor can we receive such expected wireless message from outside world.
- We cannot send human to space or over to any celestial body, where travelling requires more than half life span of the human.
- Human cannot live for a long period over any celestial body, if its gravity is more than 50% that of the Earth.
- Human cannot colonize human over any celestial body for more than a few decades because of its links (life-line) with the Earth-world.
- Human can not be teleported.

Explanation over all the said facts was given earlier; it was a long illustration. To make the concerned concentrated over the challenged subject: Astronomy and light/rays, only the extract of this chapter has been presently stated above; revised explanation would be exhibited shortly.
