

CHAPTER-15

MIND-SET TREND

Highlights about the chapter MIND-SET TREND in MATERIALISTIC UNIVERSE by Ramesh Varma.

Note: Chapter over MIND-SET TREND is not an encyclopedia. Challenger has illustrated only which relates to the new or contrary findings/understandings with some existing references to make the subject understandable.

- It is the mind-set trend and gang of snags which are keeping away the World (Physicists/Astronomers and the concerned) from correctly understanding the subjects which have been challenged by the Challenger. Description in short about the said fact and gang of snags is not possible, so read under the relevant chapters.

CHAPTER - 15

MIND-SET TRAND

Why the World (Intellectuals, Astronomers, Scientists or Students) could not realize the simple facts, which have been observed, concluded and challenged by the Challenger?

There are numbers of factors and snags which are keeping the World away from correctly understanding the subjects, which have been challenged. Some factors have been stated in this chapter and snags i.e., gang of snags and some other factors have been illustrated in the chapter: MISCELLANEOUS OVER THE DISCOVERIES AND CHALLENGED SUBJECTS.

1. Mind-set trend:

- Author had observed and concluded that the said fact is all due to a mind and body set trend. This mind-set trend is an easy-mode to think and to live. Also this mind-set trend makes the persons to rely on others; others included thoughts, knowledge, person(s), devices, tools, machines and now the computers.

Other devices which help human physically have already made a loss to the physical strength of the related to life body, but now computers would do a great harm to the mind and also to the body. By the end of the 21st century most people would find problems in all spheres. This human set-up would lead in towards the extinction of human race.

It has been proved and now an established fact that slightly less intake diet than required by the body is good for health and to achieve longevity. The same principle is for the other materialistic achievements or requirements by the human for better brain function. The persons (Physicists/Astronomers/Concerned) who get-well; are paid-well or earn-well or have even get more than the required; their brain mostly work under the **mind-set trend**. And the persons who are over the poverty line or below have no time to think other than for the bread, shelter and other body needs. Persons from the middle class who there are not satisfied with the existing earnings, they think and look here and there thus some of them get the chance to think over the subjects other than the mind-set trend. So the persons who are in the middle income-group or are getting slightly lesser than the required or getting reasonably, form a different group from which some persons are likely to break the mind-set trend. Whereas majority form a group of mind-set trend people, so a mind-set trend in the World exists, which lasts for centuries till someone breaks the trend.

- **Why we (other than the children) are doing well with the computers now?**

Computer has just come in our life after the year 1960. We all have been developed our self to work even without the help of computers. The computer helped us to grow more and more, but the coming generations would be developed with the help of computers, their brain would not work much, they all would be depending upon the computers help and knowledge. This would make them and their generations brain- impotent.

Coming generation would be much weaker in the brain-observations than the present or the past-era persons.

2. Some dictionary-words used by the World too forbid the persons to think beyond the limit of the meaning of the

dictionary-words.

As regards to the subject Astronomy, Author had observed some of the dictionary-words which may have put a dent in the brain thought. These words are God; Universal/fundamental forces; Energy; Positively and Negatively charge particles/electrons; North and South magnetic poles; and Synchronized etc.

God: If a person understands that The God has created the Sun, our Earth and the entire Universe; he/she can't explore the Universe.

Universal/fundamental forces: There are four fundamental forces (also known as Universal forces). They are the strong nuclear, electromagnetic, weak nuclear and gravitational forces. World by calling these forces as fundamental or Universal forces has locked the brain of the concerned and coming generations for not to think that why are these forces or what is causing these forces? Challenger has observed and concluded by understanding unique property of light/rays and states of the matter that there would be only one Universal force or truth but not many like one God and that force/truth is that the Universe is materialistic; there is nothing like pure-energy, it is the white-matter which acts as energy.

Energy: What harm has the words 'Energy' done in understanding it only as energy and not a state of the matter; it has been well explained under the relevant chapters.

Positively and negatively charge particles/electrons: By stating that the positively and negatively charged electrons attract each other to neutralize the effects, brain stops seeking the reason because every one knows (+) and (-) cancels each other and the result is zero.

North and south poles of the magnets: Explanation is similar to above said and the practical illustrated under the Chapter 'Magnetism' proves the observation.

Synchronized with another body: The word 'synchronized' has been used by the World, while it noticed some orbital speeds of the two adjacent bodies like 'Earth and Moon' or 'Venus and Earth' synchronizing with each other. The use of the word 'Synchronized' must have locked the brain to think beyond this, whereas the speed of the bodies are due to the facts as stated by the Author.

Conclusion: Author had observed that the World could not proceed ahead during the past without these words but their use must not be understood as universal truth. Such words have set the mind to a set-trend but now the Author had made an attempt to break this pause of the knowledge. These words have not done much harm, which the **Computer-Animated** programs would do and also are doing.

3. Is computer-animated program a good information provider and the best understanding media?

World is thinking that computer-animated programs are good, because these are easy to be understood by all. What so ever we know or understand that all is based on the correct/false information and knowledge we have at present. We were/are no where perfect with the knowledge and nor-we will be ever in the future. Any computer-animated program telecast over the TV or through any media leaves a permanent scar of the knowledge over the minds of the viewers irrespective of the correctness of the program. This all would depend upon the knowledge of the producer. Such programs shut the brain of viewers to think other than what they have seen over the screen.

During the past, imaginary stories had polluted the mind of the generations and its scars are still in our minds. Any thing seen through eyes leaves a greater impact than only heard; so computer-animated programs would do greater harm beyond any limits.

While watching a computer-animated program, viewer forgets that he/she is watching not a real film shot but understands it as real fact. Most of the persons never realized and could not understand the difference between a real-shot and computer-animated program. Author has observed that it is must to stop this growing wrong trend. Most of such computer-animated programs are over the future life of the animals or human; journey to the distant stars and other heavenly bodies etc.

Governments must ban or make a mandatory law that all computer-animated programs would carry *continues* message over a side of the screen.

COMPUTER-ANIMATED

This step would be helpful in guiding the coming generations from the false understanding, considering it to be the true shot/film/message.
